

MUZZLE

SUMMARY

The invention concerns a muzzle (12) comprising a restraining part (14) designed to surround the mouth of an animal (10) to prevent it from opening, and means for holding (20, 22) the part on the head. It is characterized in that said part (14) is arranged in such a way that it opens elastically so long as it is subjected to a force less than a limit value, and it is locked if that force is exceeded.
